

Claims

1. A foam head (1) for a propellant container (2), having an inner and outer
5 crimped edge (3, 4) of a valve plate (5), in which the foam head (1), having an
actuation button (6) and a foam dispensing opening (7), is embodied as seatable
directly on a valve stem (8), characterized in that a lower portion (9) of the foam
head (1) has an outer diameter (10) approximately equal to an inner diameter (11)
10 of the inner crimped edge (3); that in a lower region (12) of the lower portion (9),
diametrically opposite the actuation button (6), there is an outer rib (13) for
engagement from beneath of a lower side (14) of the inner crimped edge (3); and
that a lower peripheral region (15) of the lower portion (9) is provided with at least
one recess (16) for the sake of forming an annular spring (17).

15 2. A foam head (1) having a propellant container (2), having an inner and
outer crimped edge (3, 4) of a valve plate (5), in which the foam head (1), having
an actuation button (6) and a foam dispensing opening (7), is embodied as
seatable directly on a valve stem (8), characterized in that a lower portion (9) of
the foam head (1) has an outer diameter (10) approximately equal to an inner
20 diameter (11) of the inner crimped edge (3); that in a lower region (12) of the lower
portion (9), diametrically opposite the actuation button (6), there is an outer rib
(13) for engagement from beneath of a lower side (14) of the inner crimped edge
(3); that a lower peripheral region (15) of the lower portion (9) is provided with at
least one recess (16) for the sake of forming an annular spring (17); and that the
25 outer crimped edge (4) is intended as a connecting seat (18) of a sleeve (20)
sheathing at least the upper region (19) of the propellant container (2).

3. The foam head (1) having a propellant container (2) as defined by claim 2,
characterized in that the sleeve (20) is embodied as a graspable part (21).

30 4. The foam head (1) having a propellant container (2) as defined by claim 3,
characterized in that the graspable part (21) is embodied as slip-proof.

5. The foam head (1) having a propellant container (2) as defined by claim 2,

characterized in that the sleeve (20) is designed as a decorative part (22).

- 5 6. The foam head (1) having a propellant container (2) as defined by claim 2, characterized in that an upper part of the sleeve (20) is provided with a clamping bead (27) for mounting a guard cap (25) in such a way that it can be released again, and the outer diameter of the clamping bead (27) is equivalent to the outer diameter of the crimped edge (4).
